# **Pros Finally Have the Right Tool to Remove Mangled, Corroded Screws with New Screw Biter™ from Crescent**

*Extraction mechanism uses impact force to free up frozen screws*

Sparks, Md.—Professionals in the trades have always had a grin-and-bear-it mentality to get the job done. When it comes to extracting a damaged, corroded or frozen screw, there simply hasn't been a go-to tool, so pros have made do with what they had to get that thing to turn. Turns out, there's a better way: the new Screw Biter™ Impact Extraction Screwdrivers from Crescent.

“This is another one of those categories, another one of those user problems that has seen little to no innovation in decades,” senior product manager Jarrett Wolf said. “So, we took on the challenge, and the result is something truly innovative. Finally, there's a screwdriver that can actually remove screws that exist in the real world—that are beat up, worn down or frozen. With Screw Biter, you can quickly break screws loose and move on to the next one.”

Ordinary screwdrivers don't allow for the torque needed to break frozen screws free, leaving the user's hands to take the brunt of it. The beauty of the Screw Biter's design is the spring-loaded handle. Once the screwdriver is aligned with the stubborn screw, a hammer strike to the high-performance steel endcap activates the internal mechanism and uses that force to turn the screw 12 degrees.

*Crescent Screw Biter™ Impact Extraction Screwdrivers use impact force to turn frozen or damaged screws.*

Screw Biter is available in Phillips #2 and ¼-inch slotted styles. For more information, visit [crescenttool.com](http://crescenttool.com).
